

SCREEN PRINTING

Is the technique of transferring ink thru a mesh screen onto a garment by pulling it over the screen with a squeegee. For each color in a design, an additional screen must be created. Garments then go thru an industrial dryer to cure the ink. Low cure ink specifically designed for polyester fabric should be used on performance wear. Typical logo placement is left chest, full front or back, and sleeves. Screen Printing is a great option for larger quantity print orders. Vector art is required.

LET US HELP WITH YOUR NEXT SCREEN PRINT PROJECT.

Whether you need 1 shirt or 1,000+ shirts, we are here to assist. Our experienced team will ensure your customer receives exactly what they expect.

BENEFITS

- 1** Great for large quantity print jobs
